 Current Status and Outlook of Robotics Business
 Performance of the Robotics Business
 FY2020 Quarterly Operating Profit
 FY2020 4Q Outlook and Initiatives

## **Performance of the Robotics Business**

- Performance improved through the 1H of FY2018 due to increased global investment demand, particularly in China.
- After that, we were faced with the influence of US-China trade friction and the spread of new coronavirus infection.
- In the 2H of FY2020, in addition to the recovery of the automobile market, investment in automation in the general industry is accelerating.

\*1 Data up to FY2018 are based on Japanese GAAP (IFRS adopted in FY2019) \*2 Reference data for the period from September 21, 2017 to March 20, 2018 due to the change in the fiscal year end \*3 Data reflecting the impact of the reclassification of segments conducted in FY2019

# FY2020 Quarterly Operating Profit

- While new coronavirus affected revenue significantly in 1Q, we stayed in the black through thorough expense control
- After 2Q, automobile-related demand has been recovering mainly in China. Profitability improved through continued expense control while revenue grew

# FY2020 4Q Outlook and Initiatives

#### • FY2020 4Q Robotics results are expected to improve both in sales and profits, QoQ and YoY

	FY2020 4		20 4Q	FY2020 3Q		Changes (QoQ)		FY2019 4Q		Changes (YoY)	
	(Billions of yen)	Forecasts	Profit ratio	Results	Profit ratio	Amounts	%	Results	Profit ratio	Amounts	%
Revenue	Total	101.0		93.1		+7.9	+8.5%	101.2		-0.2	-0.2%
	Robotics	36.3		34.2		+2.1	+6.0%	35.6		+0.7	+1.9%
Operating	<b>profit</b> Total	7.2	7.1%	6.7	7.2%	+0.5	+6.7%	5.1	5.0%	+2.1	+42.0%
	Robotics	2.6	7.0%	1.7	5.1%	+0.9	+50.0%	1.7	4.7%	+0.9	+55.2%

#### Initiatives by Market and Field

Auto-related market	<ul> <li>Respond to next-generation manufacturing reforms in Japan, Europe, and the US.</li> <li>Capture aggressive capital investment demand by Chinese OEM manufacturers. We will also enhance our products targeting Tier 1 parts suppliers, and propose high-value-added systems that combines the i<sup>3</sup>-Mechatronics concept to differentiate us from local SIers.</li> </ul>	
General industrial sector	<ul> <li>Capture demand for automation investment in growth markets such as new infrastructure* in China [Growth market] Next-generation communication standards '5G'-related, EV-related, 3C market such as PCs and smartphones, health equipment-related under coronavirus crisis</li> </ul>	
Semiconductor- and LCD-related markets	<ul> <li>Accelerate sales expansion with new products against the backdrop of increased demand for smartphones and data centers</li> </ul>	

\*Initiatives led by the Chinese government to rapidly promote the digitization of industry in seven specific areas

# YASKAWA

- 2. Progress and Issues in Mid- and Long-term Business Plans
  - **①Market Environment of Industrial Robots**
  - **2**Progress and results of Challenge 25 and future initiatives
  - **③Initiatives to Increase Profitability**

# **Market Environment of Industrial Robots**

Source: IFR World Robotics 2020 "All type shipments", forecasts for and after 2020 are Yaskawa estimates

#### ♦ Outlook on global shipment units

- In 2020, due to the influence of the new coronavirus, all regions except China are expected to have negative growth of -10% to -20% over the previous year.
- Shipments are expected to return to pre-corona levels around 2022

#### Global market share analysis by application

# **Progress and Results of Challenge 25 and Future Initiatives**

	Progress and Results	Future Initiatives
Initiative 1 Expand orders in key markets (Automobile and general markets)	<ul> <li>Automobile market</li> <li>Proposing total solutions based on the i<sup>3</sup>-Mechatronics concept to respond to changes in production processes accompanying the shift to EVs and expansion of automated fields</li> <li>General market</li> <li>Expanding robotics applications in the growing markets especially in China's 3C market</li> </ul>	<ul> <li>Automobile market</li> <li>Deploy differentiation strategy through realization of high added value such as improvement of welding quality through use of digital data</li> <li>Expansion of after-sales service business through predictive maintenance functions</li> <li>General market</li> <li>Enhance solution proposal with YRM controller (tentative name)</li> <li>Strengthen collaboration with Chinese robot manufacturers</li> </ul>
<b>Initiative 2</b> Expand product and technology areas by strengthening development capabilities	<ul> <li>Development of new products</li> <li>Expansion of the lineup of collaborative robots, semiconductor wafer transfer robots, small robots (payload less than 10 kg), etc.</li> <li>Market deployment of YASKAWA Cockpit, which aggregates and utilizes data</li> <li>Accelerated development of YRM controller (tentative name) for data-based cell control</li> </ul>	<ul> <li>Development of new products</li> <li>Develop next-generation robots that contribute to improving manufacturing efficiency and quality by supporting high-mix variable volume production through further data utilization</li> <li>Expand collaborative robots' lineup and improve usability</li> <li>Expansion of the technical domain</li> <li>Realize the i<sup>3</sup>-Mechatronics concept through robot autonomy and the structuring of digital twin</li> </ul>
<b>Basic Policy 3</b> Boosting production capacity and productivity in response to market expansion	<ul> <li>Capacity expansion         <ul> <li>Robot production began in Slovenia</li> <li>Rectification of production process due to completion of Changzhou 3rd plant in China</li> </ul> </li> <li>Productivity improvement         <ul> <li>Introduction of collaborative robots at Plant No.1 in Kitakyushu</li> <li>Introduction of Yaskawa Solution Factory Concept to plants in Japan and China (Changzhou)</li> </ul> </li> </ul>	<ul> <li>Productivity improvement</li> <li>Reestablish global production capacity and optimizing production and cost structures</li> <li>Restructure production system in Japan and responding to volume fluctuations through automation and data utilization</li> <li>Integrate production lines and complete automation of commercial testing and painting processes</li> </ul>

# **Initiatives to Increase Profitability**

## Enhancement of production capabilities

#### Optimizing global capacity balances

- Create a lean manufacturing system to reduce costs and improve capacity utilization
- Construction of highly efficient production lines through operation-free
  - Production control process is standardized and further efficiency improvement is aimed at by automation and labor saving

#### Realization of a production system that can flexibly respond to fluctuations in production volume

• Integration of production lines and complete automation of commercial testing and painting processes

## Enhancement of sales capabilities

#### Creating business opportunities through integrated sales and service operations

• Strengthen proposal capabilities through synergy effects from the acquisition of a service and engineering subsidiary and aim for a highly profitable structure

#### Implementation of regional strategy

	Japan	Respond to the "manufacturing reform" of automobile     OEM manufacturers	North America	Strengthen measures in the logistics market	
		<ul> <li>Accelerate sales expansion through new products in the semiconductor and food markets</li> </ul>	China	<ul> <li>Capture new demand in growth markets such as 3C and 5G-related industries</li> <li>Acquire positions in the growing semiconductor market</li> </ul>	
	Europe	<ul> <li>Strengthen approaches to automobile manufacturers by leveraging the strengths of local production</li> </ul>			
	Asia	<ul> <li>• Expand sales to major local manufacturers through the i<sup>3</sup>-Mechatronics proposal</li> <li>• Responding to the shift to EVs in new technological fields</li> </ul>

# **Evolution of Robotics Solutions (1/2)**

# Robotics applications continue to expand Imitation Imitatio Imitat

High Productivity = Accuracy, High Volume, High Speed

Multitasking, Flexibility, and Interaction

Ability required of the robot

# **Evolution of Robotics Solutions (2/2)**

## **Evolution to improve process flexibility**

#### Evolution to autonomy

# Epansion of autonomous capacity with IoT and AI

#### Autonomous self-running

Modifying work processes

# Automatic generation of motion (teaching-free

- Automatic generation of motion paths
- Automatic generation of tasks
   based on the state information

# Guarantee of work quality

- Estimation of work quality by operation data
- Inspection by audio and image

## Responding to changes over time

- Change of operating parameter
- Prediction of robot failure

Completion of a given task

## i<sup>3</sup>-Mechatronics Concept (1/2)

i<sup>3</sup>-Mechatronics

Advances in Mechatronics though digital data management

Realize revolution of industrial automation

# i<sup>3</sup>-Mechatronics Concept (2/2)

\*1: Edge is an information processing field for data analysis and feedback that require real-time performance at production sites or factories.
\*2: A software that able to collect, store, and analyze real-time data on equipment and devices at production sites.
